Matthew Clark

Senior Software Engineer | Application Architecture | System Design

Orlando, FL | linkedin.com/in/everdein | github.com/everdein

Portfolio: everdein.github.io/portfolio

Professional Summary

Hands-on senior software engineer and technical leader with 5+ years of software engineering experience. Design across applications, backend services, APIs, storage, and enterprise integrations. Previously owned frontend architecture for two customer-facing life insurance applications, established shared engineering practices, and supported a six-engineer team through design and delivery.

Professional Experience

Senior Software Engineer

PBK | Sep 2026–Present | Remote, Orlando, FL

- Provide technical direction and hands-on engineering across applications, data platforms, and enterprise integrations. Define system boundaries, interfaces, data flows, and upstream and downstream dependencies with business stakeholders, IT, and external development teams.
- Develop and evaluate solutions using Microsoft Azure, Databricks, Microsoft Fabric, Next.js, and Abacus.AI, with integration work involving Concur, Workday, Deltek, Salesforce, and Autodesk.
- Build an AI-assisted PDF review workflow intended to cover 1,200+ Deltek projects, identifying missing data and developing green, yellow, and red completeness ratings. Work is ongoing.
- Review applications, guide technical handoffs, and establish practices for code quality, documentation, maintainability, and ongoing ownership.

Lead Software Engineer

State Farm | Sep 2023–Sep 2026 | Remote, Orlando, FL

- Owned frontend architecture and technical direction for two customer-facing life insurance applications using React, TypeScript, and Redux. Guided delivery across application, API, and downstream-service boundaries while supporting a six-engineer team.
- Established shared architecture and roughly 40 common modules. Led migration from a retiring UI framework to the enterprise design system while product delivery continued.
- Expanded the primary application to 3,335 automated test cases at 97.08% coverage; established six CI quality gates with Playwright and Axe browser and accessibility validation.
- Redesigned multistage Docker builds and nginx packaging to exclude more than 600 MB of build-time dependencies from final images across both applications.

Professional Experience Continued

State Farm — Lead Software Engineer continued

- Remediated 10 vulnerability findings spanning five CVEs, including seven Critical-severity findings. Delivered containerized frontend applications through Red Hat OpenShift on AWS.
- Resolved cross-system blockers for transaction and reporting workflows across engineering, data, analytics, and business teams. Traced API, orchestration, and business-event dependencies to troubleshoot production issues.
- Created a 45-page engineering knowledge base and reusable tooling that other engineers independently extended. Mentored through design, reviews, and pairing; supported stakeholder demos and technical interviews.

Software Engineer

State Farm | Jun 2021–Sep 2023 | Remote, Orlando, FL

- Built and maintained React, TypeScript, and Redux applications; implemented multi-step policy workflows, validation, state management, and backend API integrations.
- Expanded automated testing and reusable components; collaborated with product, UX, and backend teams on accessibility, troubleshooting, and production delivery. Promoted to Lead in September 2023.

Selected Independent Projects

Financial Pay Period Planner

Independently built household cash-flow application using React, TypeScript, Redux Toolkit, Spring Boot, PostgreSQL, and Flyway. Implemented database-backed sessions, CSRF protection, workspace isolation, and explicit version-checked saves. Verification includes Vitest, Playwright, PostgreSQL integration tests, JaCoCo, and accessibility checks. Local-first; not production hosted.

DSA Dojo — Interactive Algorithm Studio

Framework-free JavaScript learning application with 55 interactive lessons across 20 topics. Deterministic traces synchronize visualization, source highlighting, narration, and accessible playback. Includes algorithm comparisons, device-local progress, and Node.js, Playwright, and axe-core verification.

Technical Capabilities

System design, application and solution architecture, full-stack development, technical leadership, and system integration. React, TypeScript, JavaScript, Java, Spring Boot, PostgreSQL, Redux Toolkit, Docker, CI/CD, test automation, application security, and web accessibility.

AI-assisted programming across professional and independent development, with human review and architectural ownership. Applied generative AI for document analysis at PBK.

Education

Bachelor of Science in Computer Science | Bellevue College, Bellevue, Washington
