LEAD SOFTWARE ENGINEER | FRONTEND ARCHITECTURE | FULL-STACK DELIVERY

PROFESSIONAL SUMMARY

Lead Software Engineer with 5+ years of experience designing and delivering accessible, production React and TypeScript applications for complex customer workflows. Own frontend architecture from component systems and state management through API contracts, testing, observability, and release delivery. Trusted to turn ambiguous product needs into maintainable systems, lead cross-functional technical decisions, mentor engineers, and extend frontend depth into Spring Boot, PostgreSQL, authentication, and system design.

TECHNICAL STRENGTHS

Frontend: React, TypeScript, JavaScript, Redux Toolkit, HTML, CSS, component systems, responsive UI, accessibility

Backend & Data: Java, Spring Boot, REST APIs, PostgreSQL, Flyway, authentication, validation, error handling

Quality & Delivery: automated testing, integration and browser testing, CI/CD, observability, performance, security, Git/GitHub

Architecture & Leadership: system design, API contracts, ADRs, reusable patterns, code review, mentoring, cross-functional delivery, AI-assisted development

PROFESSIONAL EXPERIENCE

State Farm | Remote | Jun 2021 - Present

Lead Software Engineer, Nov 2023 - Present | Software Engineer, Jun 2021 - Nov 2023

- Lead frontend architecture and end-to-end delivery of customer-facing React and TypeScript applications supporting complex insurance transactions used by thousands of customers.
- Translate ambiguous product and UX concepts into accessible workflows spanning component design, application state, routing, validation, API integration, loading and error behavior, and release delivery.
- Design reusable components and Redux Toolkit patterns that improve consistency, maintainability, and engineering velocity across configuration-heavy application flows.
- Partner with product, UX, backend, and architecture teams to shape API contracts, data transformations, validation rules, edge cases, and system boundaries.
- Advance automated testing, client-side observability, performance, accessibility, documentation, and ADRs to improve reliability and reduce tribal knowledge.
- Lead technical planning, architecture reviews, code reviews, and collaborative debugging while balancing delivery speed, user experience, and long-term maintainability.
- Mentor engineers and create shared ownership through design discussions, pairing, feedback, and repeatable engineering standards.
- Deliver major customer-facing functionality ahead of planned timelines through proactive architecture, iterative delivery, and close stakeholder alignment.

SELECTED ENGINEERING WORK

Pay Period Planner | Independent Full-Stack Application | [Source](#)

- Designed and built an authenticated household cash-flow planning application with React, TypeScript, Redux Toolkit, Spring Boot, and PostgreSQL.
- Evolved a local JSON prototype into a workspace-scoped relational system with Flyway migrations, session authentication, CSRF protection, optimistic concurrency, validation, and audit history.
- Documented architecture and tradeoffs through ADRs and case studies; verified behavior with unit, integration, browser, accessibility, responsive, and dependency-security checks.

EDUCATION

Bachelor of Science, Computer Science - Bellevue College, Bellevue, WA
